

Filming Fundamentals Movie

Your next project will be called the “Filming Fundamentals Movie.” In this project you will work with two other classmates to create a movie that shows examples of the topics listed below. It may be a good idea to show an example of a topic or technique used well and an example of a topic or technique being misused. In addition to the topics listed below, you will research two or three other filming techniques and include them in your movie. Have fun with this! There are many techniques that can make your movie very interesting and exciting for your audience. Your movie should be between 5 and 7 minutes long. See Mr. Howe for examples.

Topics:

Camera angle and height

Terminology for types of shots and different camera distances

Sound

Zoom and Pan

Lighting

Contrast and Background

Rule of Thirds

Research and include **three** other filming techniques.
